EXPERIENCE/PROJECTS

Smart Campus Plant Information

- Developed a web-based plant information system using HTML, CSS, JavaScript, Supabase, QR Codes, and Google Maps API to provide plant details, images, location, and growth information.
- Implemented AI-assisted plant identification and dynamic database integration, enabling users to access plant information through QR-code scanning and a responsive web interface.

AI-Based Emergency Rescue System

- Developing an AI-driven emergency rescue coordination system using Flutter, Dart, Firebase, Google Maps API, GPS/Location Services, and AI-based accident detection to identify accidents and coordinate emergency assistance.
- Designed a real-time workflow for automatic accident detection, SOS alerts, volunteer notification, location sharing, navigation, and nearest-hospital routing to reduce emergency response time.
